

1. Open SQL Server Profiler and use the template TSQL_Duration to monitor when T-SQL statements have been completed.

2. Run the following query in SSMS.

```
1. USE AdventureWorksDW2014
2. go
3. select count(*) from [dbo].[DimDate]
```

3. Go back to SQL Server Profiler and see what the results are.

4. Do the same thing in Extended Events. Make sure you select/check the following checkboxes: "Start the event session immediately after session creation", and "Watch live data on screen as it is captured."

5. Open Performance Monitor and monitor the "% Processor Time" (the default). Add to this, in the Processor category, "% Privileged Time".
